Vireo Audio — Refund Intelligence Review

To: Arjun Mehta, Finance Controller
Subject: 18-Month Refund Review — Key Findings and Management Actions

Executive summary

The support export contains **12,238 ticket rows**, representing **11,600 unique canonical tickets** after removing **638 migration duplicates**. After reconciliation and currency normalization, total refund value for Jan 2025–Jun 2026 is **₹67.10 lakh**, averaging **₹11.18 lakh per quarter**.

Refunds were present on **2,340 tickets**, giving an overall refund rate of **20.17%**.

Where the money is going

The largest review population is GW-OTHER. It accounts for **991 refund tickets worth ₹29.07 lakh**. Of these, **879 cases exceed the ₹500 policy review threshold**. This makes GW-OTHER the primary area for root-cause review rather than treating these refunds as a single undifferentiated category.

The reconciliation also identified **166 refund + replacement "double-dip" cases**, representing combined financial exposure of **₹8.71 lakh** — ₹5.74 lakh in refunds and ₹2.97 lakh in replacement hardware/shipping.

Separately, **1,060 first-response SLA breaches** correspond to **₹3.71 lakh in penalty exposure** under the applicable policy calculation.

What the tool provides

The resulting tool converts the raw helpdesk export into:

- Monthly refund value and ticket volume
- Refunds by reason code
- Refund attribution by agent
- Policy exception checks
- Double-dip identification
- GW-OTHER cases requiring review
- AI-assisted root-cause suggestions for GW-OTHER
- Reconciliation and validation checks

The AI component is decision support, not ground truth. It was tested against a manually audited **30-ticket benchmark**, where **29 classifications agreed with the audit and 1 did not**.

Recommended management focus

The immediate operational review should concentrate on the **879 high-value GW-OTHER cases**, particularly identifying recurring causes that are currently being recorded under the generic code. The double-dip cases should also be reviewed against the underlying ticket and replacement records before treating the full exposure as confirmed leakage.

Business goal

Reduce avoidable refund leakage by systematically reviewing the **879 GW-OTHER cases above the ₹500 threshold**, which form part of the **₹29.07 lakh GW-OTHER refund pool**. The tool provides a repeatable way to identify the underlying causes and prioritize cases for management review.
